

COMPARISON

Bandit SG-75 > RAYCO RG74T-R

COMPACT DESIGN

The SG-75 is more compact compared to the Rayco with a max length of 134" compared to the Rayco's 156". The SG-75 also weighs around 600 pounds less allowing it to travel over softer terrain and yards leaving less of a footprint.

CHIP CONTAINMENT

With the largest chip containment rating in its class of 54 cubic feet, it is easier to clean up the debris after grinding. Rayco does not list a chip containment spec, but if you look at their machine compared to the SG-75 you can see the difference.

ACCESSIBILITY

The engine sits on top of the boom on the SG-75 and the engine features access doors on each side allowing easy access to all filters, fill ports and the hydraulic pump. The rear cabinet doors on the SG-75 easily open allowing easy access to the hydraulic valves and fittings for easy maintenance and less downtime. The components on the Rayco are all located in a steel housing making it more difficult to access and work on increasing downtime and reducing productivity.

EASY TO MAINTAIN

The cutterwheel is driven with a low maintenance gearbox drive system and is engaged utilizing an NACD clutch. The Rayco's cutterwheel is engaged with a hydrostatic system while the cutterwheel is driven with a belt that will require adjustments.
