

COMPARISON

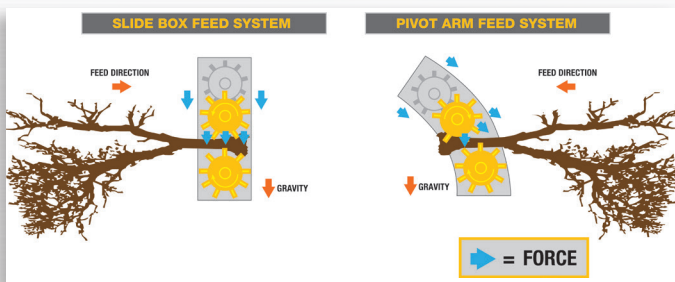

Intimidator™ 12XP > Vermeer BC1200XL

DRUM EFFICIENCY

The Bandit drum has four knives and rotates at approximately 1,530 RPM's compared to the Vermeer two-knife drum rotating at 2,205 – 2,220 RPM. With double the knives, there are more cuts per revolution and less distance in between the knives decreasing wood hitting against the drum. Additionally, a slower rotating drum creates additional torque for maximum chipping efficiency. These combinations allow the Bandit to operate with less vibration and better fuel economy.

THE BANDIT SLIDE BOX FEED SYSTEM

Allows the top feed wheel to move straight up and down, providing direct down pressure on material entering the chipper using down pressure springs and the standard hydraulic lift cylinder reducing the need to trim and increasing productivity. Whereas, the Vermeer pivot arm system utilizes a pivoting top feed wheel that moves up and down on an arc away from the chipping drum. There is little direct down pressure, limiting pulling and compressing power causing more chainsaw work and decreased production.

VARIETY OF ENGINE OPTIONS

Are available on the 12XP ranging from 74 to 145 horsepower (gas or diesel). The Vermeer BC1200XL is currently only offered with a Origin 115 horsepower gas engine.

SMOOTH FEEDING

The reversing auto feed system on the 12XP is programmed to work in conjunction with the engines RPM creating a smooth efficient chipping action. The Vermeer Smart Feed is designed to reverse the feed system on a frequent basis creating increased vibration, reduced feeding efficiency and chip quality.
